THE BROWN VANITY

Because every vanity deserves something beautiful.

Assignment 2 — E-commerce Site: Static, Responsive Pages

Student: Mahum Riaz
Course: Web Technologies (CSC336)
Project: The Brown Vanity — static e-commerce storefront

Project overview

The Brown Vanity is a static e-commerce website concept for a curated beauty boutique. It includes a product-listing homepage and a separate product-detail page, with a consistent brand identity, navigation, product cards and footer.

Reference website

Structural reference: Cozmetica.pk — Makeup collection page. The project adapts its product-grid structure for The Brown Vanity's own branding and content.

Reference URL: https://cozmetica.pk/collections/makeup

Technologies and layout

HTML5 and CSS3, with CSS Grid/Flexbox and responsive CSS media queries. The navigation, product layout and controls are static for this assignment; cart and purchase controls are visual placeholders.

Project files

index.html — homepage/product listing
product.html — single product detail page
style.css — styling and responsive layout
images/ — product images
README.md — project and reference information

The following pages document the desktop and phone layouts.

1. Homepage / Product Listing — Desktop

The homepage includes the brand header and navigation, an introductory section, and a product listing with eight product cards, images, prices and product-view buttons.

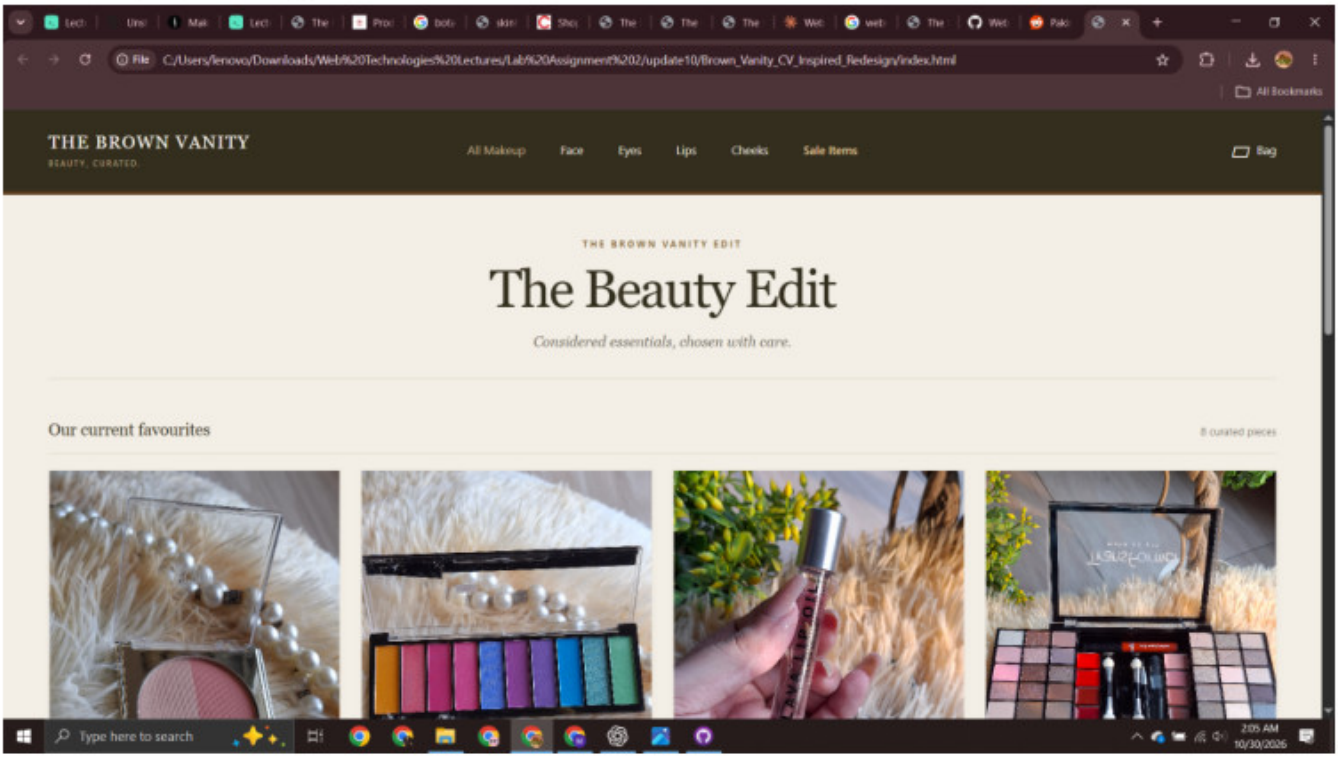

Figure 1. Desktop homepage and featured products.

2. Product Grid — Desktop

The desktop product listing uses a four-column grid. Each card contains a product image, product name, price and a button linking to the product detail page.

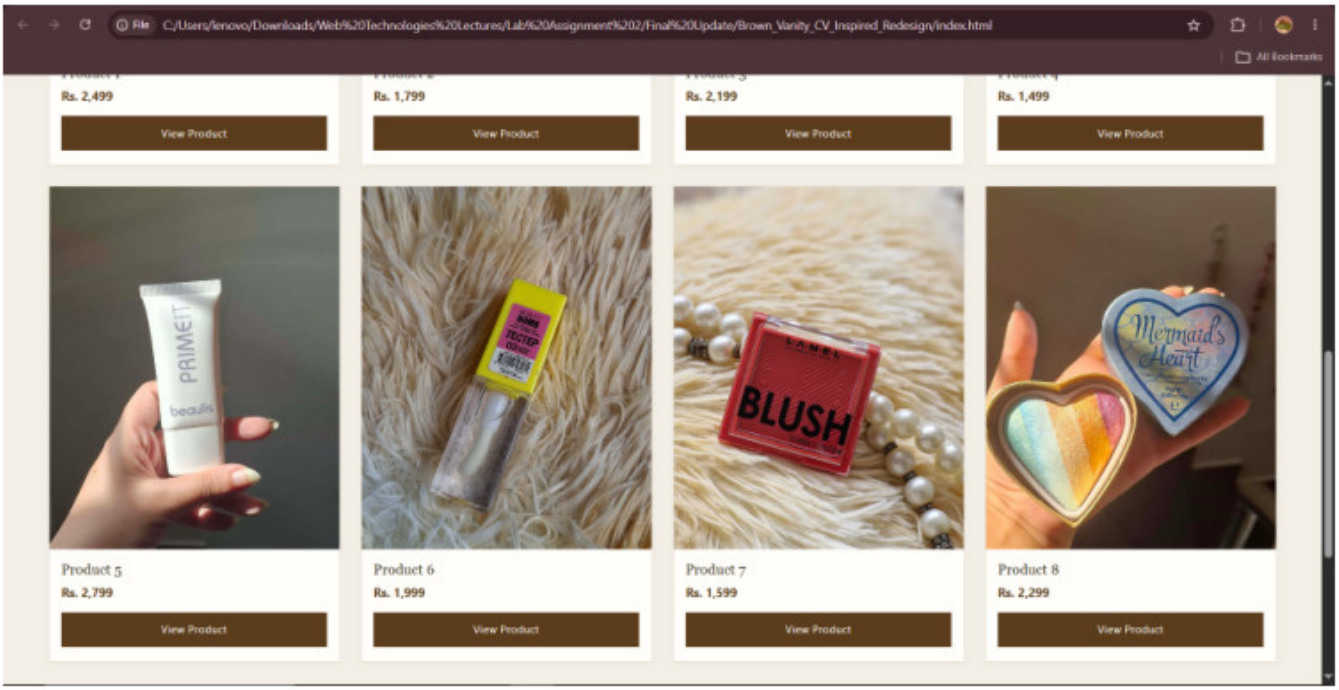

Figure 2. Desktop product grid.

3. Footer — Desktop

The shared footer contains brand information, category navigation, policy links, contact placeholders and a copyright notice.

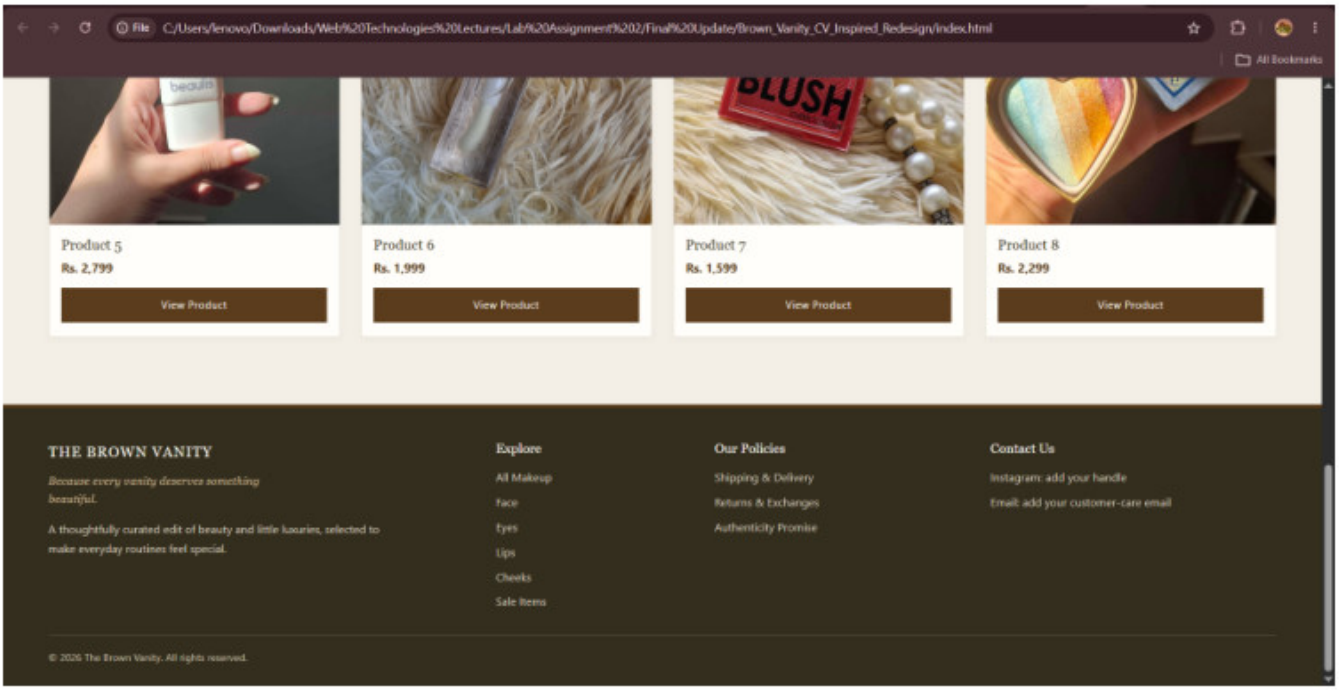

Figure 3. Desktop footer.

4. Product Detail Page — Desktop

The product detail page displays a larger product image, product name, price, description, quantity selector and an Add to Cart button. The controls are non-functional placeholders for this static assignment.

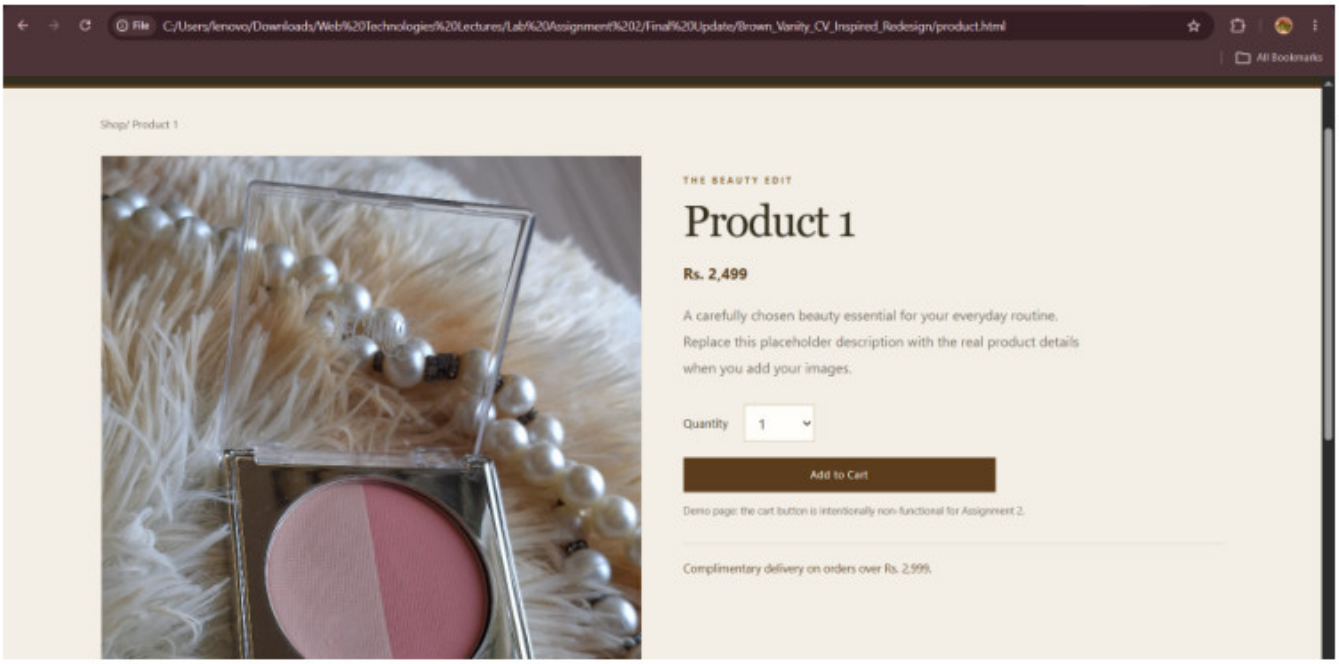

Figure 4. Desktop product detail page.

5. Responsive Layout — Phone (375px)

The following screenshots were captured in Chrome device emulation at a viewport width of 375 pixels. The product detail layout and product listing reflow into a single-column mobile presentation.

Figure 5. Phone-width product detail page (375px).

6. Responsive Product Grid — Phone (375px)

The product cards stack vertically on the phone-width viewport, keeping the images, product information and buttons within the narrow screen.
