LAB 2

Responsive Navbar and Grid Drill

Completion Report

Objective

To practise responsive layout techniques by creating a navigation bar that collapses into a hamburger menu on smaller screens and a product grid that adapts to desktop, tablet, and phone widths.

Technologies used

HTML5, CSS3, Bootstrap 5, CSS Grid, Flexbox, and Bootstrap's responsive navbar collapse component.

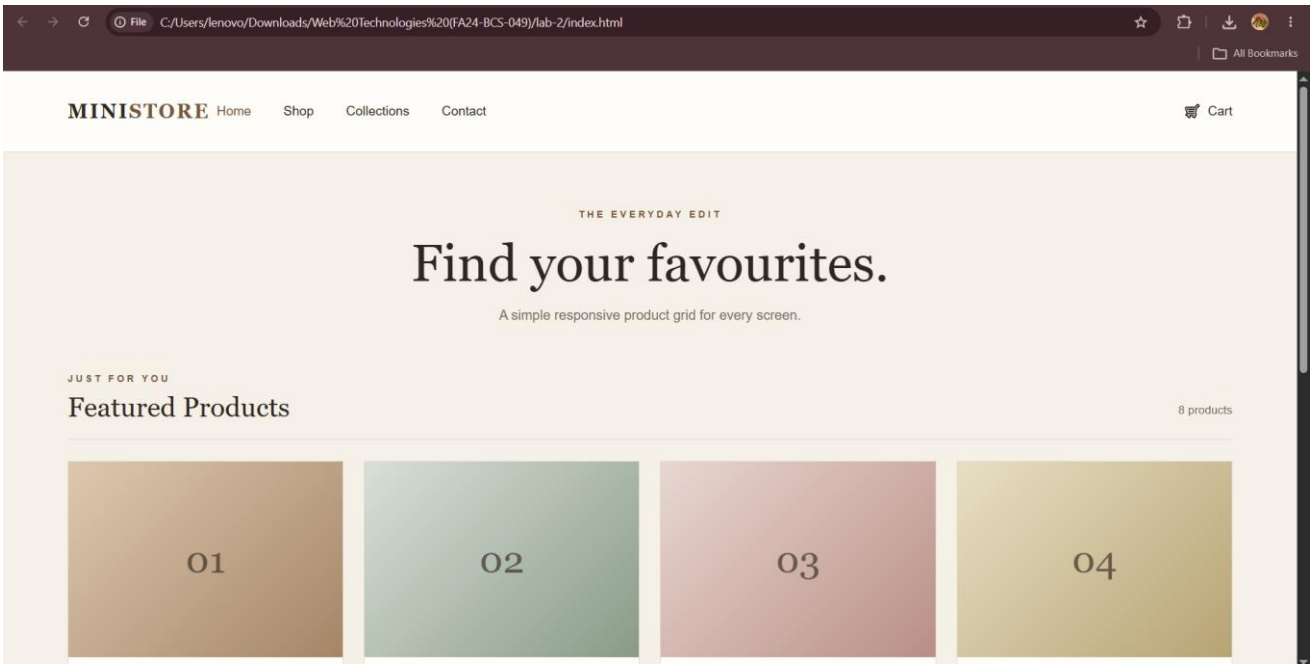

Implemented requirements

• Logo positioned on the left, navigation links centred, and cart positioned on the right.
• Bootstrap hamburger navigation for screen widths below 768px.
• Product grid configured for four columns on desktop, two columns on tablet (768px–991.98px), and one column on phones (up to 767.98px).
• Eight sample product cards with prices and View Product buttons.
• Responsive spacing, hover effects, and a simple footer.

Files: index.html and style.css. Bootstrap 5 CSS and JavaScript are loaded through the official CDN, so an internet connection is required to load the framework.

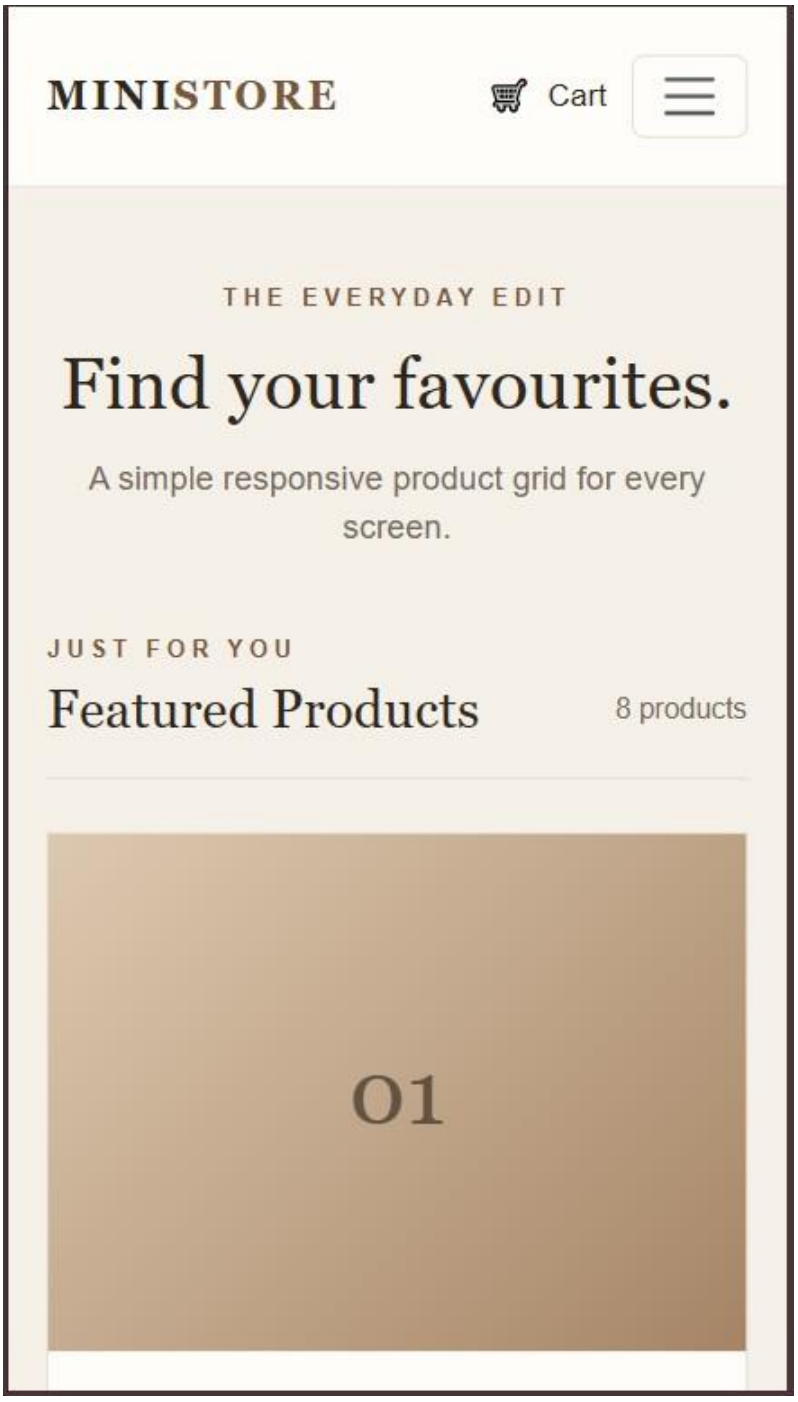

1. Desktop View

The desktop preview shows the full navigation links between the brand and cart, along with the four-column product grid.

2. Phone View

The phone preview shows the compact navigation bar with the hamburger control and a single-column product layout.

3. Additional Responsive Preview

This supplied preview is labelled at 1032px wide in the browser's device toolbar. It therefore shows the four-column desktop layout. It is included as an additional responsive preview, not as proof of the required two-column tablet breakpoint.
